

ANIKET BIRADAR

B.Sc. Computer Science Student

+91 9322367404 | [E-mail](#) | [LinkedIn](#) | [GitHub](#)

SUMMARY:

B.Sc. Computer Science student (4th semester) with hands-on experience designing and implementing backend systems, automation tools, and database-driven web applications using **Python** and **Java**. Strong foundation in **data structures**, **object-oriented programming**, **SQL**, and **software engineering** principles. Experienced with **MVC architecture**, and **version control using Git**. Actively developing production-oriented skills with **Django** and **Spring**. Seeking backend development internship or entry-level software engineering roles.

EDUCATION:

Bachelor of Science (Computer Science) — COCSIT, Latur

Expected Graduation: 2027 | **Current Semester:** 4

Current CGPA: 9.55 / 10.0

Relevant Coursework: Data Structures, Database Management Systems, Software Engineering

TECHNICAL SKILLS:

Programming Languages: Python, Java, C, C++, JavaScript

Backend & Web Technologies: JSP, Servlets, MVC Architecture, Django, Flask

Databases: MySQL, SQLite, MongoDB

Libraries & Tools: NumPy, Pandas, Tkinter, PyPDF2, Git, GitHub

Engineering Concepts: Object-Oriented Programming (OOP), Data Structures, SQL, SDLC, basic unit testing

PROJECTS:

- Image Scraper | Python, Requests, Selenium, MongoDB** [GitHub](#)
 - Built an automated image-scraping pipeline to extract images from dynamic web pages with pagination support, retry logic, and robust error handling.
 - Designed a MongoDB-based storage layer to manage image metadata and binaries efficiently for repeated data collection.
 - Developed reusable scripts to generate structured image datasets for downstream use.
- Library Management System | Java, JSP, Servlets, MySQL** [GitHub](#)
 - Developed a full-stack web application using Java, JSP, Servlets, and MVC architecture to manage library operations.
 - Implemented role-based access control, secure authentication, and transactional book issue/return workflows with server-side validation.
 - Designed and optimized a relational MySQL database schema and SQL queries to support reporting and analytics.
- Personal Expense Tracker (Desktop Application) | Python, Tkinter, SQLite, Matplotlib** [GitHub](#)
 - Developed a desktop-based expense tracking application using Python and Tkinter with a layered MVC-style architecture.
 - Implemented category-wise budgeting, real-time expense monitoring, and monthly analytical reports with charts using Matplotlib.
 - Designed a persistent SQLite database and packaged the application as a Windows installer (Setup.exe) using PyInstaller and Inno Setup.

ACADEMIC ACTIVITIES & ACHIEVEMENTS:

Presented a technical poster at **Aavishkar-2025**, a district-level research festival, communicating problem statement, methodology, and implementation approach to faculty and peer reviewers.

ADDITIONAL INFORMATION:

Availability: Open to internships, part-time roles, and collaborative projects

Languages: English (Fluent), Marathi
